6. Glossary

Term	Meaning
Diversification level	<p>Diversification can arise from having broad exposures to investments across differing asset classes, companies, industries, geographies, company capital structures, active asset management styles, currencies and counterparties. These, and other diversifiers, are considered when determining the diversification level applicable within an investment option.</p> <p>To assist members in making an informed choice, Hostplus has used the following descriptions of the level of diversification applicable to each investment option:</p> <p>High diversification means that the investment option has wide levels of exposures across these diversifiers, including over multiple asset classes. For example, the Balanced option is invested across multiple asset classes including unlisted assets, as well as multiple investment managers, geographies, company capital structures, active asset management styles, currencies and counterparties.</p> <p>Medium diversification means that the investment option has intermediate levels of exposures across these diversifiers, sometimes over multiple asset classes. For example, the Indexed Balanced option is invested across a number of investment managers, assets, and geographies, but is limited to investing in listed companies, bonds and cash.</p> <p>Low diversification means that the investment option has more limited levels of exposures across these diversifiers and rarely over multiple asset classes. For example, the Australian Shares option is diversified across multiple companies and investment managers, however it is limited to investing only in the Australian shares asset class.</p> <p><i>These terms appear in the 'summary' and 'who is this investment suitable for?' of our investment options.</i></p>
